Demonstration of Precision Agriculture (PA) principles in the Great Southern of WA

**Derk Bakker, Jeremy Lemon, Alison Lacey, John Paul Collins, Glen
Riethmuller,** DAFWA

Roger Mandel, Curtin University

Frank D'Emden, Precision Agronomics Australia,

Precision Agriculture (PA)

“An integrated information- production-based farming system that is designed to increase long-term, site-specific and whole farm production efficiency, productivity and profitability while minimising unintended impacts on wildlife and the environment” US House of Representatives (1997)

“Tailoring inputs to crop quality and quantity while providing economic, environmental, social benefits” (Whelan, 2007)

“An all-encompassing term given to the use of a suite of technologies that promote improved management of agricultural production through recognition that the potential productivity of agricultural land can vary considerably” (Brambley 2009)

“Targeting your inputs where and when it is needed” (Bakker 2011)

- PA is complicated and involves computers.
- Is there one area in agriculture that doesn't.
- PA is complicated and just makes useless colourful maps.
- Most things that are not being used are often “useless”.
- PA is expensive.
- Doesn't have to be, but need to spend money to make money.
- PA doesn't pay.
- Sometimes it doesn't, but mostly it does.

Department of
Agriculture and Food

Aspects of PA have been adopted:

- Farm planning phase
 - Georeferenced soil sampling
 - Guidance (Visual/Autosteer)
 - Yield monitoring
 - Mapping (EM38/Radiometrics/NDVI)
 - Target spraying (Weed-seeker)
 - Variable rate (mapping)
 - Variable rate (On-the-go sensors)
 - Flying monitoring and detection platforms
 - Ag robots

“Taking PA to the paddock - increasing the adoption of PA in the Great Southern of WA”

Training and demonstration of Precision Agriculture (PA) project
“Beyond guidance”

**Through workshops and demonstration trials
in collaboration with grower groups in the Great Southern**

Grower groups: Facey (Wickepin), Nyabing FIG, FBG (Jerramungup), Stirlings-to-Coast Farmers, NSP (Borden), Gillami (Cranbrook), Southern DIRT (Kojonup)

Workshops:

- 2009 “Demystifying PA” (general principles, trial coordination) (growers + Ag_b)
7 locations, 56 attended (1-19)
- 2010 Pre-harvest (Hands on PA software training) (growers)
5 locations, 40 attended (3 - 16)
“Making PA pay for your client” (Agri-business)
2 locations, 17 attended (7, 10)
- 2011 Post-harvest (Use of management zones, trial results, rate controllers)
5 locations, 42 attended (4 - 13)

Collaboration from various dealers: Green Line, Farmers Centre, Ratten and Slater and MacIntosh&Son

Shires from Brktn, Kent, Jer, Plnt, to Kjp

	<1000 ha	1000-2000 ha	2000-3000 ha	3000-4000 ha	4000-5000 ha	>5000 ha	Total
No. growers	2222	883	211	67	32	29	3444
Area (mill. ha)	1	1.2	0.5	0.22	0.142	0.19	3.252
No growers (%)	64	26	6	2	1	1	100
Area (%)	32	36	15	7	4	6	100

Q: Why is PA not adopted? A: Not sure whether it is cost effective.

Use of PA	Guidance	Yield monitor	VRA	Controlled traffic	
%	60	33	3	2	
Issues causing problems (hardware)	Guidance	Monitors	Controllers	Data storage	Communication
%	22	22	19	19	19
Issues causing problems (software)	Uploading data	Cleaning maps	Making prescription maps	Uploading controllers	Backing up data
%	22	20	18	19	21

Average cropping program	How many years have you been yield mapping					
	ha	No	<1	1-3 yrs	3-5 yrs	>5 yrs
1600	2	1	1	4		
2800	3	0	3			
2100	1	1	3			1
1000	1	2				1
2600	4	3	4	2		3
2020	28%	18%	28%	15%		13%

- Supply training and equipping of growers in a small group training format.

Demonstration trials

Department of
Agriculture and Food

Main aim: Is matching inputs to soil types profitable?

Determine: Production zones (“mud maps”, yield maps, EM38)

Soil sample zones: 0-10, 10-30, 30-60cm.

Fertiliser requirements.

Treatments:

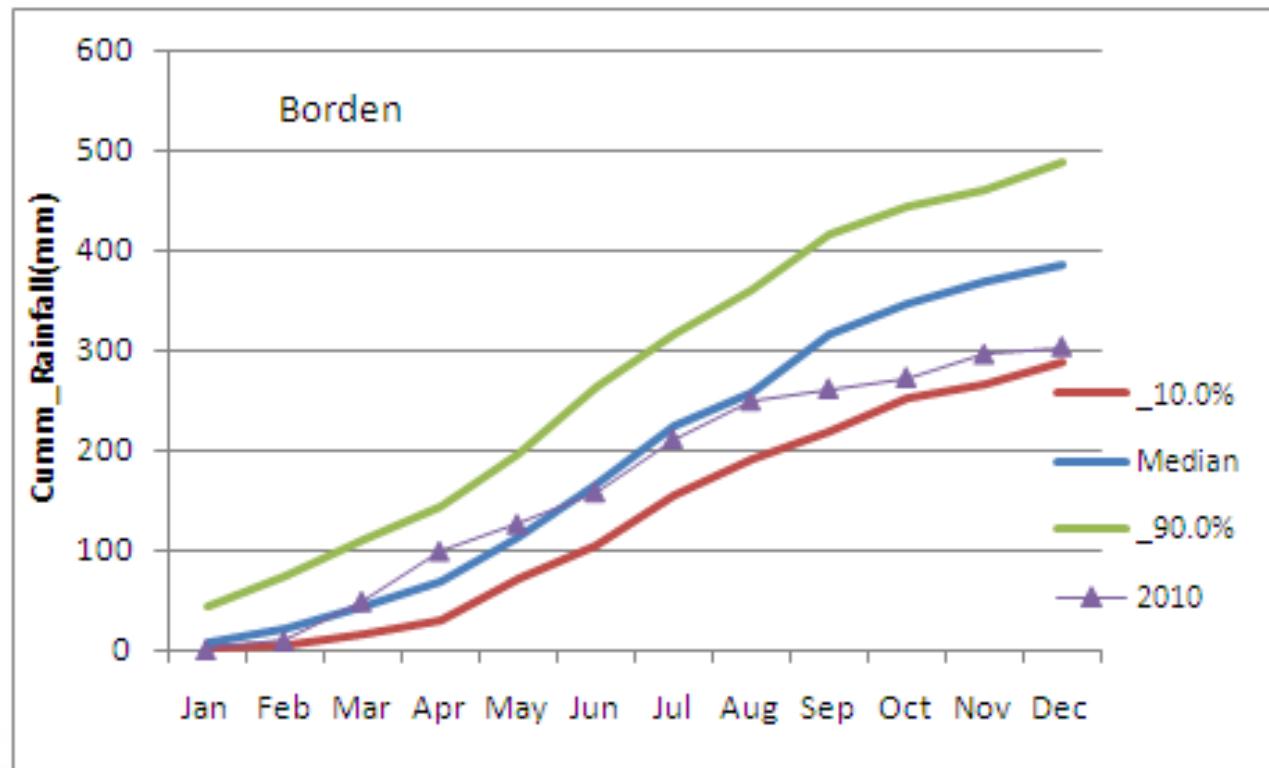

Low, normal, high rates of fert. at seeding (11)

Low, normal and high rate of N after seeding (5)

Gypsum (1), Lime (4), Ripping (1)

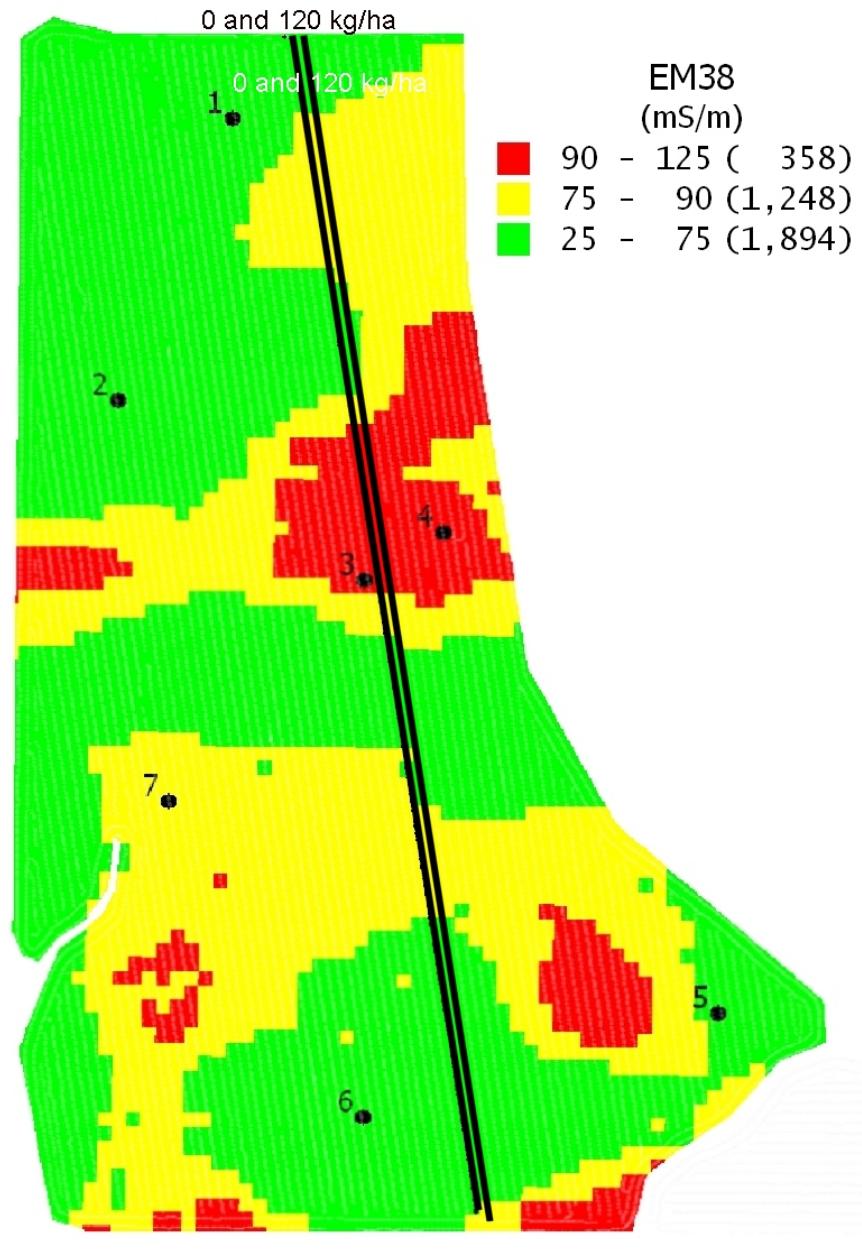

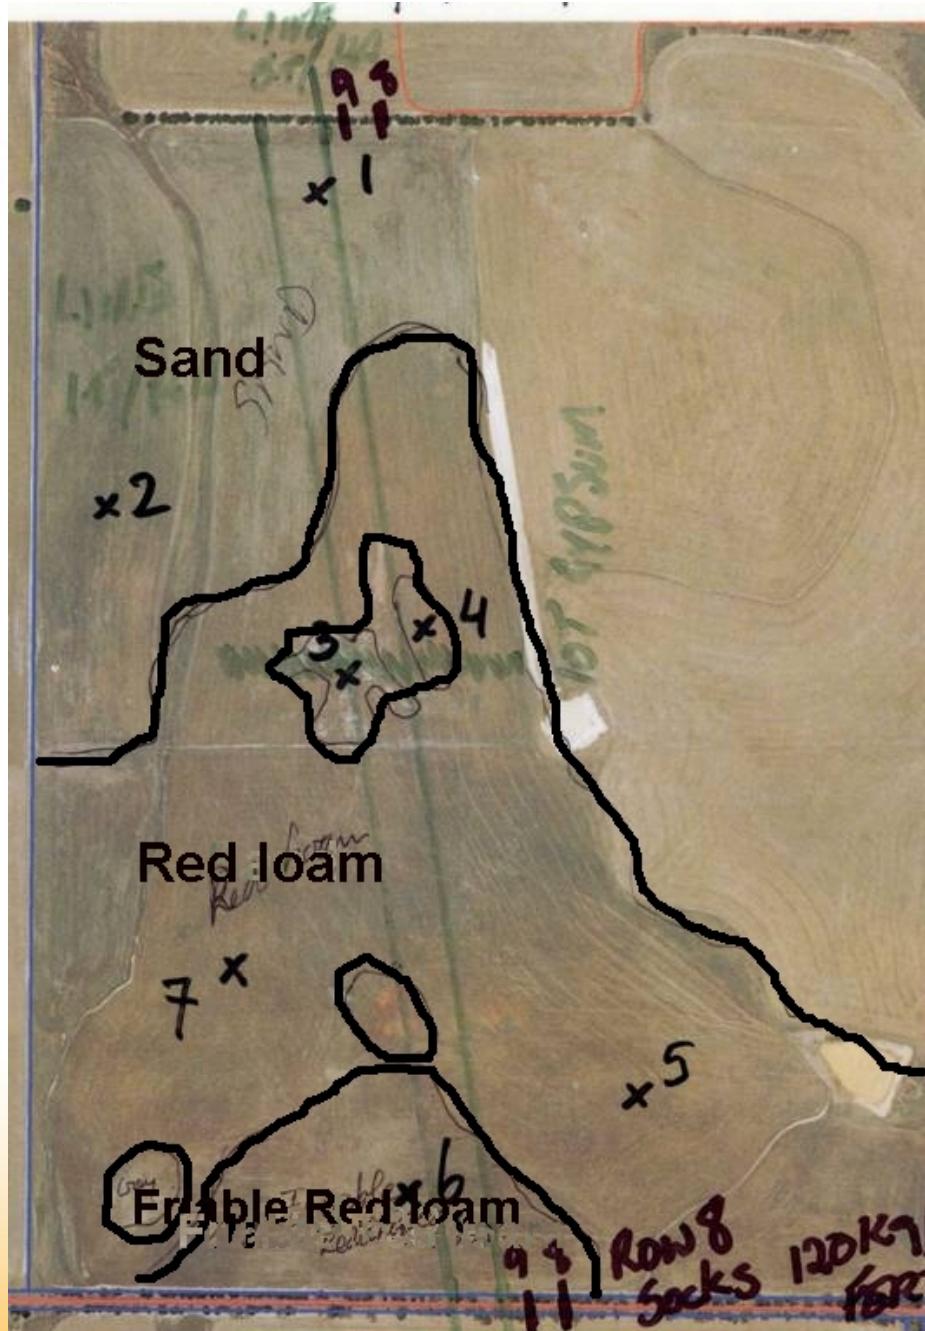

Applied treatments across the zones by growers (1-3 passes).

Observations: Germination, Green seeker (July), Biomass (PCD)
(October), Yield (+ quality)

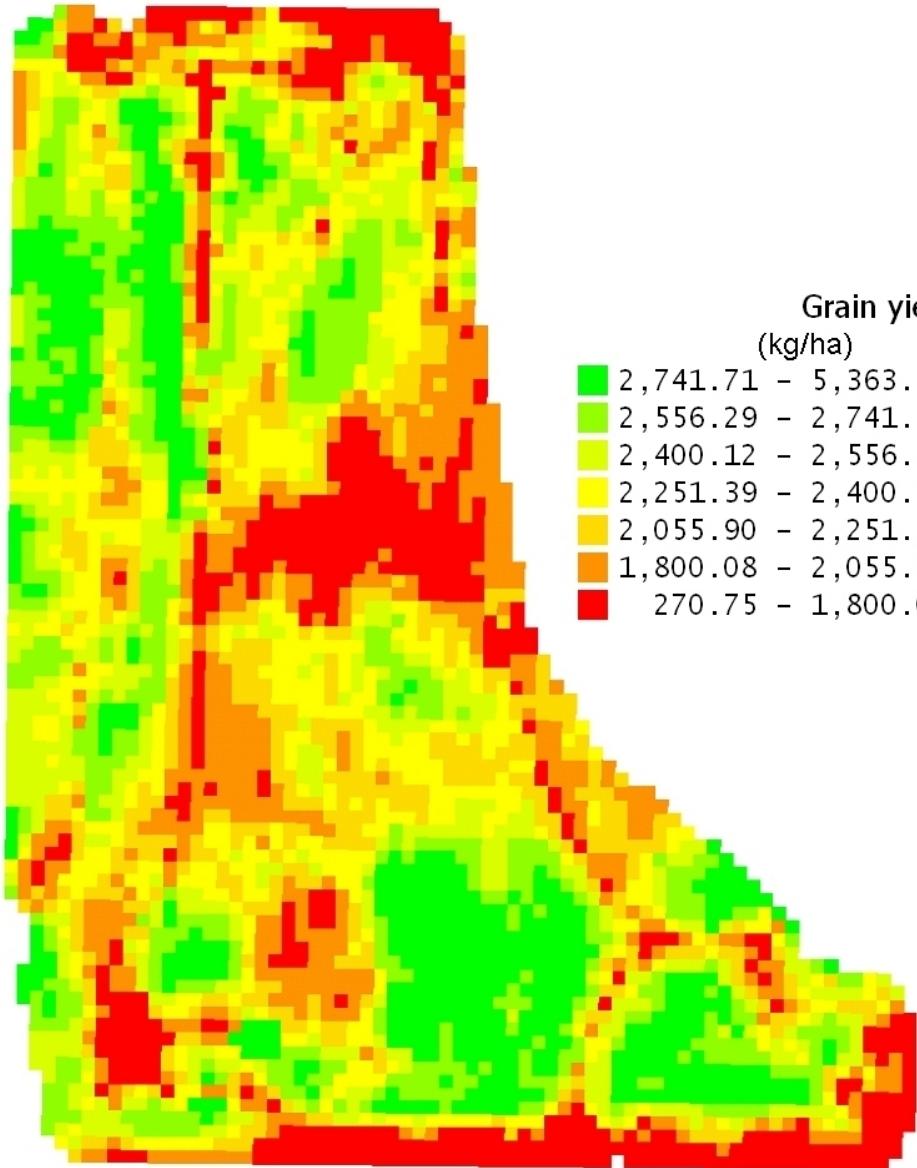

Cumulative rainfall 2010 in relation to the median, decile 1 and 9

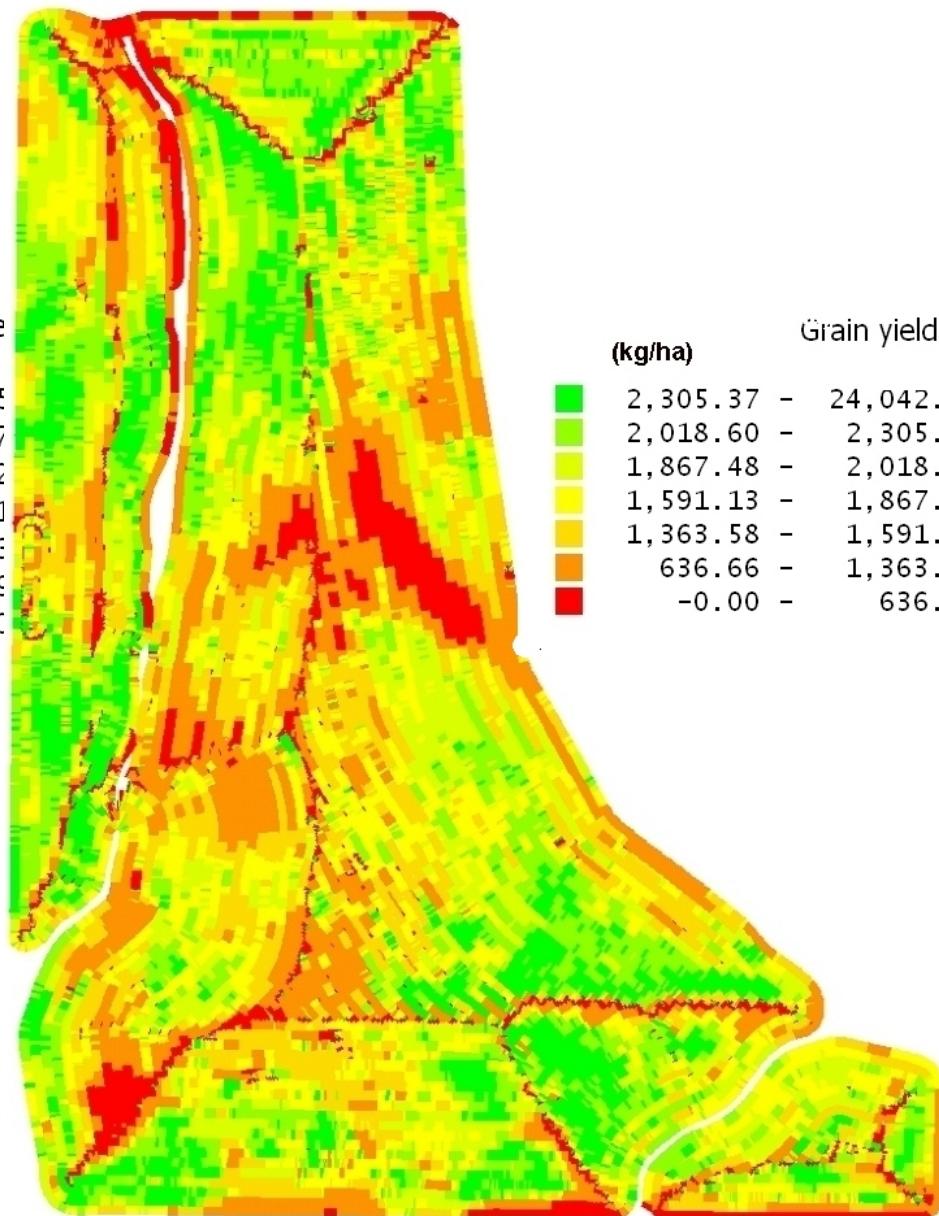

Case study 1

2010 barley yield response to N by zones - Kamballup

Net of fert. return (\$)	Blanket rate, 175 kg/ha		
	Zone	VRT rate (0, 0, 175 kg/ha)	Blanket rate, 0 kg/ha
High (1/3)		643	650
Medium (1/3)		472	580
Low (1/3)		276	470
Total		1391	1700

Near the northern edge/dam

In summary:

- There is a general interest in PA but VRA is still far from mainstream adoption.
- Workshops have been used for training purposes but this needs to be extended to smaller groups for more effective training.
- The demonstration trials have shown so far that reduced inputs can be very profitable but these need to be extended to multiple years to obtain a more realistic response.
- From a basis of sufficient supply the use of P-replacement is a good start for the use of Variable Rate Applications.

Thank you
